SUMMARY

Full-stack software engineer with four years shipping production React and Node.js systems, focused on front-end work and the integrations behind it. Owned a large production data remediation end to end and reviewed 200+ pull requests.

EXPERIENCE

Product Web Developer II, Thryv | Marketing Center Engineering, Dallas, TX 12/2024 to present

- Shipped customer-facing features in React and Node.js: purchase and upsell flows, an AI search visibility dashboard, monthly reports, scoped auth and a Search Console integration. Provisioned its GCP environments as code in Terraform.
- Owned a production data remediation of about 49K records end to end: built Node.js scripts into a toolkit to audit, rewrite, verify and roll back changes, defined the decision rules, and reported to stakeholders. Writes were dry-run first and snapshotted per row. About 77% of rows verified correct and about 22% of obsolete rows removed, with none outstanding.
- Engineering escalation point for support and fulfillment across US, AU and NZ accounts. Traced recurring analytics and tagging failures to root causes and fixed them, including a batch repair across hundreds of accounts.
- Built several features on microservices and extended LaunchDarkly feature flagging from its first two repos to five.
- Authored 400+ pull requests and reviewed 200+. Helped raise unit test coverage from a handful of tests to about 99% with Jest and React Testing Library, with tests now required for every feature. Wrote runbooks and flow docs.

Product Web Developer I, Thryv | Marketing Center Engineering, Dallas, TX 09/2022 to 12/2024

- Helped build and launch Marketing Center, then maintained it as the go-to engineer for its analytics.
- Kept shipping customer-facing features and add-ons across React and Node.js, from onboarding to reporting.
- Added LaunchDarkly in two repos and redesigned user-plus-company targeting, replacing Redux conditionals with flags.

Project Manager, Commercial Electrical Solutions | Bourne, MA 03/2018 to 03/2022

- Led teams on million-dollar projects, managing scope, budget and clients to deliver on time and under budget.
- Built up and led a service division and grew its workload year over year.
- Consistently beat team targets, including 2021 profit margin targets by 40%.

Owner, MacMillan Electric | Plymouth, MA 01/2016 to 03/2018

- Owned and ran the business across multiple projects until its buyout in 2018, growing gross profit 60% each year.
- Completed subcontract electrical work for a partner company alongside my own projects.

Project Foreman, Commercial Electrical Solutions | Bourne, MA 02/2011 to 01/2016

- Led install crews from engineered plans through completion, delivering on time and under budget.
- Mentored and taught apprentice electricians.

SKILLS

- **Languages:** JavaScript, TypeScript, SQL, HTML, CSS
- **Front end:** React, Redux, Next.js, Storybook, Tailwind, Jest, React Testing Library
- **Back end:** Node.js, Express, Fastify, REST APIs, microservices, MySQL, Prisma
- **Cloud and infrastructure:** AWS, Google Cloud Platform, Terraform (infrastructure as code), Git, GitHub
- **Integrations and practice:** Auth0, Google OAuth 2.0, Google Search Console API, LaunchDarkly, Pendo, Tray.io, Duda, Google Analytics, Recurly API, Snowflake, feature flagging, code review
- **Also used:** PostgreSQL, MongoDB

PROJECTS

- **Next Holiday** (2025): Full-stack holiday planner on Next.js, TypeScript, Prisma and MySQL (18+ tables) with Auth0 login, multi-tenant accounts, role-based sharing and real-time notifications.
- **SSE Notifications** (2026): TypeScript microservice on AWS EC2 that streams real-time notifications to the Next.js app, since serverless hosting can't hold long-lived connections. Shares its MySQL database via Prisma.
- More projects and code: lanny-macmillan.com and github.com/Lanny-MacMillan

EDUCATION

- Software Engineering Immersive, General Assembly (03/2022 to 07/2022): 12-week, 450+ hour full-stack program
- Journeyman Electrical License, Board of Electrical Examiners (2007)
